

## PRODUCT HIGHLIGHTS

### Comprehensive Features

- Open architecture provides support for industry leading handheld devices from Psion Teklogix, Motorola (formerly Symbol), Intermec, LXE and others.
- Highly adaptable wireless handheld solution with robust functionality, customizable user information screens and full integration with Aware WMS.
- Perform key operations efficiently and accurately, including receiving, put-away, picking, transfers, replenishment, adjustment and on-hand stock counting.
- Manual and automated put-away.
- Real-time alerts and reports related to bar-coded transactions.
- Support for job creation on handheld devices with simple entry, editing and viewing of shipment and packing details and viewing of put-away lists.

### Benefits

- Speed put-away and picking help improve warehouse efficiency, labor resource utilization, order fulfillment and accuracy.
- Bar-coded transactions eliminate errors and duplicated data entries.
- Real-time alerts draw attention to any out of line situations before they occur.
- Highly accurate and timely information based on real-time bar-coded transactions can be provided to suppliers and customers to improve, collaboration, service levels and customer satisfaction.
- Real time updates and full integration with Aware WMS translates into improved data accuracy, timeliness and faster tracking of inventory and asset movement.

Capture real-time data with bar-coded transactions in your warehouse to improve efficiency and reduce overall operating costs.

Aware Mobile allows you to efficiently and accurately carry out key operations related to inventory in your warehouse including receiving, put-away/flow-through, picking, site-to-site or location transfer, replenishment, stock total adjustment, audit and on-hand stock counting. You can enhance data entry, enforce tighter controls, reduce operation time and improve warehouse efficiency. Aware has an open architecture and provides support for industry leading wireless handheld devices from Psion Teklogix, Motorola (formerly Symbol), Intermec, LXE and others for data entry and display of key business information.

Aware Mobile is a highly adaptable wireless solution for handheld devices that offers robust functionality and is fully integrated with the Aware WMS system. The customizable user information screens can enable you to display only the level of information from your business processes that is most important and relevant to your operators.

By being able to easily perform bar coded transactions in real time, you can eliminate errors such as duplicated data entries, prevent put-away errors as well as minimize lost or misplaced inventory with real-time validation. Aware Mobile allows users to easily create jobs on handheld wireless devices, enter, edit and view shipment and packing details and view put-away lists for a particular job. Real-time alerts and reports draw your attention to any out of line situations. Furthermore, by providing highly accurate and timely information available through Aware to your suppliers and customers, you can improve service levels and customer satisfaction.
